# COVERAGE

The data presented on the platform refer to the Amazon region of Brazil, Colombia, and Peru.

**Brazil:** The data from Brazil corresponds to the Legal Amazon. The Legal Amazon was established by Law No. 1,806, of January 6, 1953, with the goal of defining the geopolitical boundaries for the application of policies for territorial and economic sovereignty to promote its development. The boundaries of the Legal Amazon have been extended in accordance with the area of operation of the Amazon Development Authority (Sudam). Today, it covers 5,015,067.749 km<sup>2</sup>, corresponding to about 58.9% of the Brazilian territory (8,510,295.914 km<sup>2</sup>), according to the recent disclosure of the municipal network.

The Legal Amazon region consists of nine states: Acre (22 municipalities), Amapá (16), Amazonas (62), Mato Grosso (141), Pará (144), Rondônia (52), Roraima (15), Tocantins (139), and part of Maranhão (181 municipalities, of which 21 were partially integrated), totaling 772 municipalities. Although Maranhão has the largest number of municipalities, only 79.3% of its territory (or 261,350.785 km<sup>2</sup>) is included in the Legal Amazon.<sup>1</sup>

The data on the Platform considers the nine Amazonian states, with the case of Maranhão considering only the data from municipalities that are part of the Legal Amazon (see annex 1).

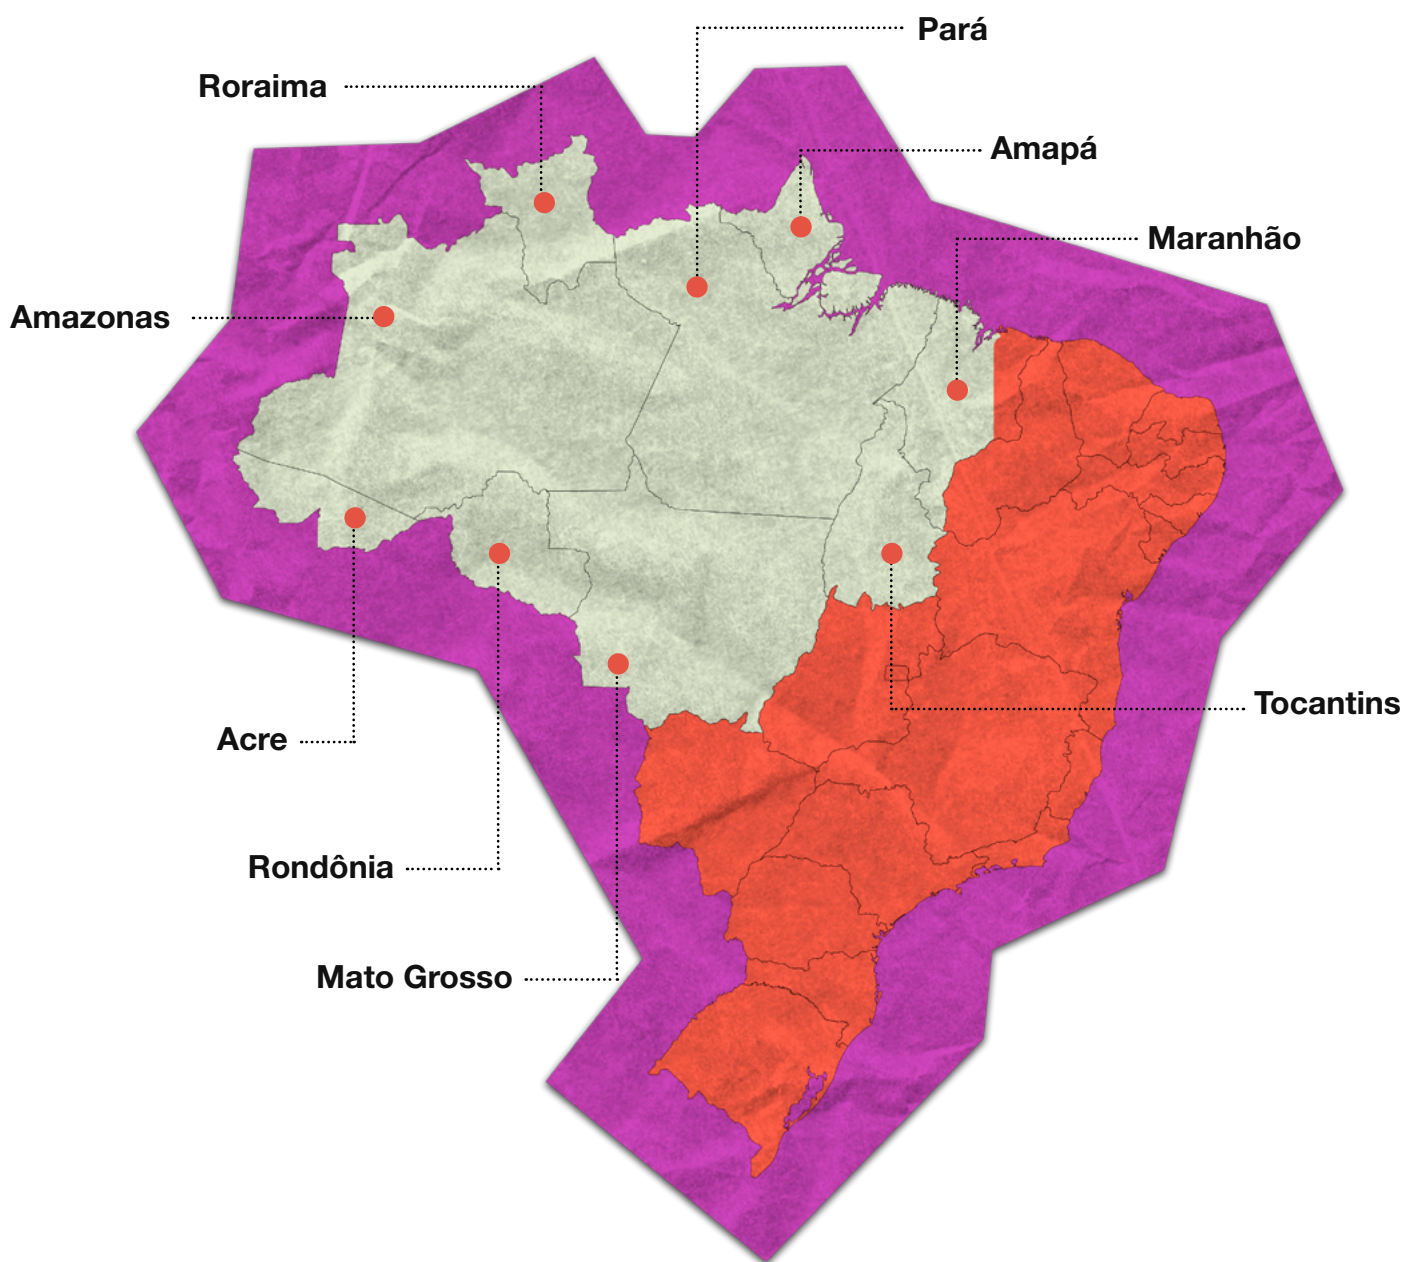

---

<sup>1</sup> Brazilian Institute of Geography and Statistics - IBGE (2020). Map of the Brazilian Legal Amazon.

<https://agenciadenoticias.ibge.gov.br/agencia-sala-de-imprensa/2013-agencia-de-noticias/releases/28089-ibge-atualiza-mapa-da-amazonia-legal>

**Figure 1.** Map of the Brazilian Legal Amazon

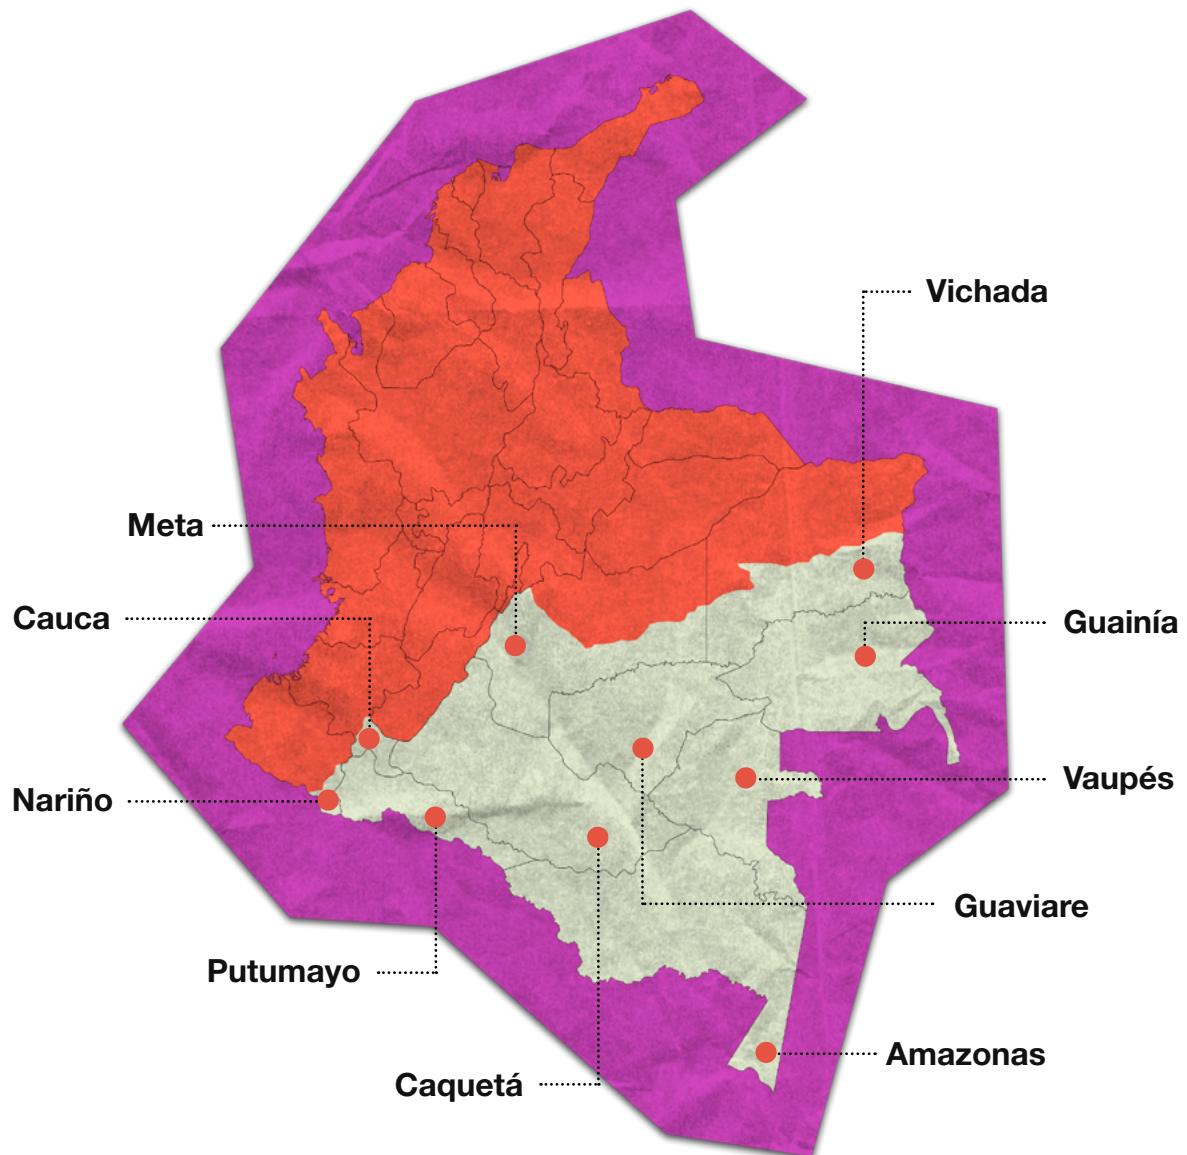

**Colombia:** The Colombian Amazon region covers 23.3% of the total national territory, including marine areas, and corresponds to 42.3% of the country's continental part. The Colombian Amazon encompasses the southern part of Vichada state; the southeast of Meta; the entirety of the states of Guainía, Guaviare, Vaupés, Amazonas, Putumayo, and Caquetá; the region known as Bota Caucana in the state of Cauca; and the slopes of Nariño, which include the upper parts of the Guamuéz, San Miguel, and Aguarico rivers. In total, it comprises 79 territorial entities, divided into 61 municipalities and 18 non-municipalized areas.<sup>2</sup>

<sup>2</sup> It is important to note that some municipalities have only a part of their territory located in the Amazon (see Annex 1). However, the databases provide information pertaining to the entirety of the municipality. The geographic representation of these data has been provided by the Amazonian Network of Socio-environmental Georeferenced Information - RAISG (Biogeographic Amazon Limit). SINCHI Institute. <https://siatac.co/la-amazonia-colombiana/>

The data included on this platform take into account the six states fully located in the Amazon. For states that are partially in the Amazon, the analysis is limited to the municipalities located within the Amazon region.

**Figure 2.** Map of the Colombian Amazon

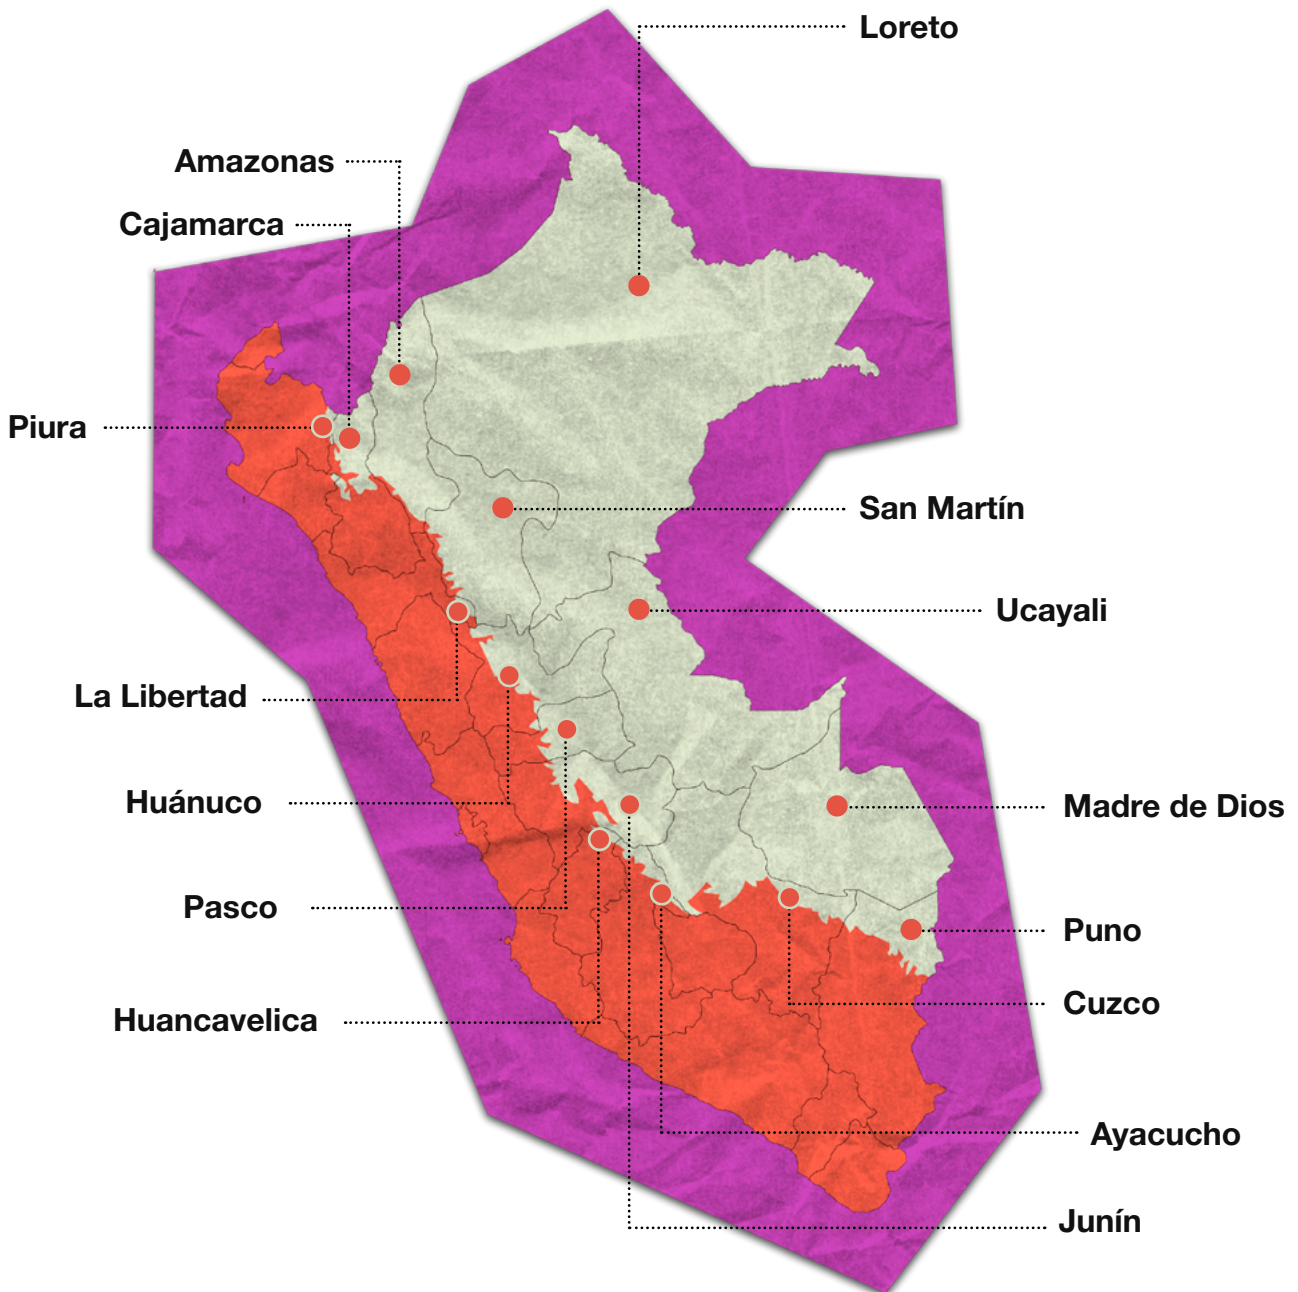

**Peru:** The territory of the Peruvian Amazon extends across the entire geographical extent of Peru's Amazon basin, in the states of Amazonas, San Martín, Loreto, Ucayali, and Madre de Dios, as well as the border areas of forest and Amazon plain from other states (Ayacucho, Cajamarca, Cuzco, Huancavelica, Huánuco, Junín, La Libertad, Pasco, Piura, and Puno). It covers an approximate area of 760,000 km<sup>2</sup>, more than 60% of the national territory.<sup>3</sup>

<sup>3</sup> Based on the ecological limits of the Peruvian Amazon Research Institute (IIAP). Geographic representation provided by the Amazonian Network of Georeferenced Socio-environmental Information (RAISG) - Biogeographic Amazon Limit.

[https://geo.socioambiental.org/raisg/rest/services/raisg/raisg\\_base/MapServer/10](https://geo.socioambiental.org/raisg/rest/services/raisg/raisg_base/MapServer/10).

The analysis methodology adopted in this study considers the five main Amazonian states. Regarding states that are only partially Amazonian, the data is limited to the provinces that are effectively located within the Amazon region. It is worth noting that, unlike in Colombia and Brazil, in Peru the second administrative level considered for analysis purposes is the province, equivalent to a municipality.

**Figure 3.** Map of the Peruvian Amazon

# Data and Sources<sup>4</sup>

## Population

The population of women in the municipalities and provinces of the Amazon in each country is a crucial piece of data. It is used to calculate incidence rates per 100,000 women for each indicator included in the platform. Using this metric allows for effective comparisons between different cities and geographical units, regardless of population variations. By standardizing indicators to this common scale, the analysis and interpretation of the proportion and intensity of the studied phenomena are simplified.

**Brazil:** The population of each state is determined by the sum of the populations of the municipalities located in the Amazon region, considering that 79% of the state of Maranhão is within the Legal Amazon. The data were obtained from the IBGE website for cities that make up the [Legal Amazon](#). Information for the period from 2017 to 2021 comes from the [Health Ministry/SVSA/DAENT/CGIAE](#). For the year 2022, as there was no official population projection at the time of data collection,<sup>5</sup> the Igarapé Institute calculated an estimate using the same method as the Brazilian Institute of Geography and Statistics (IBGE) based on the 2010 Census.<sup>6</sup>

**Colombia:** The population of each state is calculated by the sum of the population of the municipalities within that region. The source of the population data from 2017 to 2022, including the distribution by gender at the municipal level, comes from projections provided directly by the National Administrative Department of Statistics ([DANE](#)).

The list of cities that make up the Colombian Amazon can be found [here](#).

**Peru:** The population of each state is determined by the sum of the provinces located in the Amazon. The collection of population data by province and gender, covering the period from 2017 to 2022, is carried out through the population statistics platform. Source: [Population statistics from the General Directorate of Information Technologies Ministry of Health](#).

## Socio-environmental conflicts

Socio-environmental conflicts encompass tensions and disputes involving various actors, such as local communities, companies, governmental authorities, and criminal organizations, extending to issues like deforestation, mining, oil exploration, and conservation of tropical forests. They are the result of the complex interaction between economic interests, the need for environmental preservation, the defense of cultural rights, and, in some cases, the illegal exploitation of natural resources.

**Brazil:** In Brazil, the data used to identify land and water conflicts are those defined as land conflict occurrences (actions of resistance and confrontation for the possession, use, and ownership of land and for access to natural resources) and water (actions of resistance, generally collective, aiming to ensure the use and preservation of water).

Source: [CEDOC Dom Tomás Balduino – CPT](#)

<sup>4</sup> To see the current availability of data by countries and years, please refer to annex 2.

<sup>5</sup> The data was finalized in January 2024.

<sup>6</sup> The data for 2022 maintains the official projections based on the 2010 Census by state published by the IBGE. To obtain the municipal data, the IBGE applied the population changes from 2021 to 2022 to the state projections for each municipality, in each state.

<https://www.ibge.gov.br/en/statistics/social/population/18176-population-projection.html>

**Colombia:** The number of active socio-environmental conflicts per municipality until 2023 is available in the [SINCHI's socio-environmental conflict Atlas - CSA - of the Colombian Amazon](#), which was supplemented with six new conflicts identified by the [Indepaz 2022 socio-environmental conflict map](#). Socio-environmental conflicts are defined by [SICHI](#) as the "social facts" that publicly manifest discrepancies or controversies between different actors around the access, distribution, management, use, and/or conservation of natural resources in a specific space and time period.

**Peru:** The data on the number of socio-environmental conflicts (active or existing) until 2022 were provided by the Defensoría del Pueblo de Perú, upon direct request from the Igarapé Institute.<sup>7</sup> The Defensoría defines these conflicts as complex processes in which sectors of society, the state, and companies identify their objectives, interests, values, or needs as contradictory, and this contradiction may evolve into violence. The categorization includes active conflicts, manifested by one or more parties or by third parties, through public, formal, or informal demands. It also includes latent conflicts, which are social conflicts not publicly expressed, as well as those not yet manifested.

## Lethal Violence

Murder, as an extreme manifestation of violence, reflects the various conflicts present in a territory, encompassing both interpersonal and gender violence as well as actions of organized crime, in addition to covering community violence that may also involve socio-environmental conflicts.

To address this issue more comprehensively, the platform Women in the Amazon: Conflicts and Violence gathers data from two types of sources: the public health system and the public security system. The health system is responsible for recording deaths due to assaults from a medical perspective, collecting information from hospitals and health centers in each country about the victims who receive treatment for assaults. On the other hand, the security system reports homicides and femicides in the context of what is known by the criminal justice systems and police of each country.

Each of the systems adopts different methodologies and scopes, which can lead to differences in the recorded data. However, the analysis of these two sources of information is crucial to understanding the dynamics of lethal violence accurately.

Regarding the health system, all deaths are categorized according to the [Internacional Classification of Diseases \(ICD\)](#), including deaths from natural causes (diseases) and deaths from external causes (accidents, suicides, assaults, and other causes). For this project, deaths by assault were classified according to the international disease codes (ICD-10), considering assault (categories X85 to Y09) and complementing with legal interventions (Y35) and operations of war (Y36), the last two with minimal records.

**Brazil - Death by assault:** The health system uses the international Classification of Diseases (ICD 10), and this platform includes categories X85 to Y09 (assaults) and Y35 to Y36 (legal interventions and war operations). Source: [Mortality information Systema - SIM of the Ministry of Health](#).

---

<sup>7</sup> Request with registration number 0012022000219; data received on November 12, 2022.

**Colombia - Death by assault:** The health system uses the international Classification of Diseases (ICD 10), and this platform includes categories X85 to Y09 (assaults) and Y35 to Y36 (legal interventions and war operations). Source: [Vital Statistics of the Administrative Department of Statistics \(DANE\)](#).

**Peru - Death by assault:** The health system uses the international disease code (ICD 10), and this platform includes categories X85 to Y09 (assaults) and Y35 to Y36 (legal interventions and war operations). Source: [National Computerized System of Deaths \(SINADEF\) of the Ministry of Health](#).

Within the framework of the security system, police incidents are documented according to the criminal justice system of each country, based on the laws and the penal code that classifies these incidents as crimes. It is important to note that, within this context, homicides and femicides are two distinct concepts, each with its own definition in the national penal codes. Generally, homicide is defined as the act of taking another person's life, a crime that can occur in various situations, regardless of the victim's gender. On the other hand, femicide is characterized as a specific type of homicide, committed against women, and is directly linked to gender issues, highlighting the existence of structural misogynistic violence aimed at oppressing or discriminating against women. This distinction seeks not only to punish the violent act but also to expose and combat the deep-rooted causes of gender violence. The platform *Women in the Amazon: Conflicts and Violence* presents separate data for femicides and homicides (general), allowing for a more detailed and specific analysis of the forms of violence prevalent in the region.

**Brazil:** As there is no centralized information system, requests are made through the Public Information Access Law (LAI) to the Public Security Secretariats and Civil Police of each of the nine states of the Brazilian Legal Amazon. The information is available (with exceptions for specific states and years) for the period from 2017 to 2022.

In Brazil, intentional homicide and femicides are typified in the [Brazilian Penal Code](#): Intentional homicide (CP Art. 121) is the type of crime where the agent intends to kill or assumes the risk of causing death, including femicide (CP Art. 121, § 2, item VI) – a crime motivated by the condition of the victim being a woman or for reasons of her gender identity.

**Colombia:** The data is requested directly from the [National Police of Colombia](#). Intentional homicides are typified in the [Colombian Penal Code](#): Intentional homicide (CP art 103) is the type of crime where the agent intends to kill and, as in Brazil, it also encompasses femicide (Law 1.761 of 2015, integrated into CP, art. 104), which is a crime motivated by the condition of the victim being a woman or for reasons of her gender identity, or in circumstances involving any of the following aspects: a) Existence of a familial relationship, intimate cohabitation, friendship, collegiality, or work relationship with the victim, with the perpetrator being someone who carried out a cycle of physical, sexual, psychological, or economic violence that preceded the crime against her. b) Acts that instrumentalize the body and life of the woman, based on gender or sexuality, or actions that impose oppression and dominance over her fundamental decisions and her sexuality. c) Committing the crime by taking advantage of the power relations exercised over the woman, reflected in personal, economic, sexual, military, political, or socio-cultural hierarchies. d) Committing the offense with the aim of generating terror or humiliation to what is considered an enemy. e) Existence of a history or signs of any type of violence or threat in the domestic, family, work, or school environment by the aggressor against the victim, or of gender violence committed by the perpetrator against the victim, regardless of whether it has been reported or not.

**Peru:** There is no data available.

## Non-lethal Violence

The platform also includes information on manifestations of non-lethal violence and crimes that reveal the variety of aggressions faced by women, covering physical, psychological, and sexual aspects. These forms of non-lethal violence are recorded in both information systems: health and security. Within the health system, mandatory reports on physical, sexual, and psychological violence are highlighted, and incorporated into the public health event surveillance systems of each country.

**Brazil:** Reports of interpersonal violence from the [Notifiable Diseases Information System \(SINAN\)](#). [SINAN](#) receives information mainly through the notification and investigation of cases of diseases and conditions included in the national list of compulsory notification diseases (Consolidation Decree No. 4, September 28, 2017). [The Maria da Penha Law](#) (Art. 7) defines types of violence as:

- **Non-lethal physical violence:** Any conduct that offends the physical integrity of the woman.
- **Psychological violence:** Any action that causes emotional damage and decreases self-esteem, harms or disturbs the full development, or aims to degrade or control her actions, behaviors, beliefs, and decisions through threats, humiliation, manipulation, isolation, constant surveillance, harassment, insult, blackmail, privacy violation, ridicule, and limitation of the right to come and go, or any other means that may harm psychological health and self-determination.
- **Sexual violence:** Any conduct that forces someone to witness, maintain, or participate in unwanted sexual relations through intimidation, threat, coercion, or the use of force; aims to induce the

commercialization or use of their sexuality, prevent the use of any contraceptive method, or forced marriage, pregnancy, abortion, or prostitution through coercion, blackmail, bribery, or manipulation; or limits or nullifies the exercise of their sexual and reproductive rights.

**Colombia:** Gender violence cases attended by the health system are recorded in the Public Health Surveillance System ([SIMIGILA](#)), provided by direct request to the National Institute of Health of Colombia. The definition of types of violence is based on the [Law 1257 of 2008](#).

- **Non-lethal physical violence:** Physical damage or suffering; risk or diminishment of a person's physical integrity.
- **Psychological violence:** Results from actions or omissions intended to degrade or control the actions, behaviors, beliefs, and decisions of others through intimidation, manipulation, direct or indirect threat, humiliation, isolation, or any other behavior that causes harm to psychological health, self-determination, or personal development.
- **Sexual violence:** Includes the consequences of actions that force a person to maintain sexualized contact, physical or verbal, or to participate in other sexual interactions through the use of force, intimidation, coercion, blackmail, bribery, manipulation, threat, or any other mechanism that nullifies or limits personal will.

**Peru:** Cases attended at the Women's Emergency Centers (CEM) by province, inserted into the National Program for the Prevention and Eradication of Violence against Women and Members of the Family Group – [AURORA](#). The definition of family violence is based on the Case Registration Form of the Women's Emergency Center (CEM).

- **Non-lethal physical violence:** Refers to the action or conduct that causes harm to bodily integrity or health. It includes mistreatment through negligence, carelessness, or deprivation of basic needs, which have caused physical harm or may cause it, regardless of the time needed for recovery.
- **Psychological violence:** Refers to the action or omission aimed at controlling or isolating the person against their will, humiliating, embarrassing, insulting, stigmatizing, or stereotyping them, regardless of the time needed for recovery.
- **Sexual violence:** Acts of a sexual nature committed against a person without their consent or under coercion. They include acts that do not involve penetration or physical contact of any kind. Likewise, exposure to pornographic material and the violation of people's right to decide voluntarily about their sexual or reproductive life through threats, coercion, use of force, or intimidation are considered such acts.
- **Intentional bodily injury:** Offend the bodily integrity or health of another (CP, Art. 129).
- **Rape:** The act of coercing someone to have sexual intercourse or lewd acts, using violence or serious threat (CP, Art. 213).
- **Threat:** The act of threatening someone, whether by word, writing, gesture, or other symbolic means, causing unjust and serious harm (CP, Art. 147).
- **Slander/Defamation/Insult:** Slander is falsely attributing a crime to someone (CP, Art. 138). Defamation is attributing to someone a fact that negatively affects their reputation (CP, Art. 139); Insult is characterized by insulting someone, offending their dignity or decorum (CP, Art. 140).

**Colombia:** Data are requested directly from the [National Police of Colombia](#), which provides information on personal injury, rape, and threat. The crimes defined by the [Colombian Penal Code](#) are:

- **Personal injury:** Anyone who causes damage to the body or health of someone (CP, art. 111).
- **Rape:** The penal code defines rape as forced carnal access, whether by penetration of the male sexual organ or by any other part of the human body or object, through anal, vaginal, or oral means (CP, Art. 212).
- **Threat:** Anyone who, by any means, intimidates or threatens a person, family, community, or institution, with the purpose of causing alarm, distress, or terror in the population or in a sector of it (CP, Art. 347).

**Peru:** No data available.

Regarding police **occurrences and criminal statistics**, included are the cases that each country reports in its penal code as bodily injury, rape, threats, as well as moral violence.

**Brazil:** As there is no centralized information system, requests are made through the Public Access to Information Law (LAI) to the Public Security Secretariats and Civil Police of each of the nine states of the Brazilian Legal Amazon. Below are the definitions of the crimes of intentional bodily injury, rape, threat, and so-called moral violence, which include slander, defamation, and insult, according to the [Brazilian Penal Code](#):

## Political violence against women

As described by [Armed Conflict Location & Event Data Project \(ACLED\)](#), these are violent acts committed by organized armed groups against unarmed, non-combatant women. As unarmed civilians, they cannot participate in acts of political violence, thus establishing a situation of asymmetric violence, where the aggressor is the only party capable of exercising violence. Among the perpetrators of these acts are government forces and affiliates, rebel groups, militias, and external organizations, among others. In the specific case of the [database used on the platform](#), the incidents are those in which women are the primary victims, whether the targets are exclusively women or girls, or when the case affects victims predominantly female.

The data for the three countries come from the [Political violence directed against women and demonstrations that include the participation of women](#) database, from ACLED.

## Territorial pressures

These are layers of information that map the territorial context, highlighting factors that can lead to socio-environmental conflicts and increase women's vulnerabilities. This information is provided by the [Amazonian Network of Georeferenced Socio-environmental Information \(RAISG\)](#) (2022). The definitions used are based on [the terms of use available on the RAISG website](#), as well as on the details provided in the metadata of each layer of information.

### *Mining areas*

They refer to areas of interest or mining concessions. The specific data sources for each country are:

**Brazil:** Socio-Environmental Institute (ISA) and the National Mining Agency (ANM), 2022. According to ISA, mining processes were grouped by stages and divided into four classes: interest in research, research or availability, extraction request, and extraction authorization.

**Colombia:** Gaia Foundation (FGA), Digital Mining Cadaster of the Republic of Colombia and National Mining Agency, 2020.

**Peru:** Common Good Institute (IBC) and Geological Mining and Metallurgical Institute (INGEMMET/MINEM), 2021.

## *Illegal mining*

Identification of points, zones, and rivers with illegal mining locations, identified in satellite images, news, field collections, and location evidence on the exploitation of minerals. Includes the compilation by RAISG of information obtained in the countries, from different sources:

- Newspapers, working documents, academic articles; consultancy reports, and other studies.
- Personal information from experts (anthropologists and field technicians from partner institutions or others).
- Cartographic information (referential or official maps, official land use databases or from civil society organizations).
- Geographical location of the information collected with the support of satellite images and free access tools aimed at identifying:
- Regions of illegal mining exploitation or with information on conflicts due to miner invasion (polygons/spots);
- Rivers with information about illegal mining using rafts (lines);
- Specific location (exact or approximate) of illegal mining (points).

Specific sources by country:

**Brazil:** Socio-Environmental Institute and Imazon, 2020

**Colombia:** Gaia, 2020

**Peru:** IBC, 2020

## *Hydropower plants*

Location of planned, under construction, or operational hydropower plants.

Specific sources:

**Brazil:** Socio-Environmental Institute (ISA) and the National Electric Energy Agency (ANEEL), linked to the Ministry of Mines and Energy (MME), 2022.

**Colombia:** Gaia, 2020.

**Peru:** Common Good Institute (IBC) and OSINERGMIN/PCM, 2018.

## *Roads*

Layout of primary and secondary roads, as well as existing or planned railroads. The cartographic base of the roads was systematized using the following information sources:

**Brazil:** Socio-Environmental Institute (ISA) and the Amazon Environment Research Institute (Imazon). National Department of Transport Infrastructure (DNIT) (2017);

**Colombia:** Gaia Foundation (FGA). Digital cartography on a scale of 1:100,000 from the Agustín Codazzi Geographic Institute (IGAC) (2020).

**Peru:** Common Good Institute (IBC)

Source: Ministry of Transport and Communications (MTC), 2019.

# ANNEX 1

## Municipalities (Colombia and Brazil) and provinces (Peru) that make up the Amazon region on the platform *Women in the Amazon: Conflicts and Violence*

### COLOMBIA: 80 municipalities

State	Municipalities
Amazonas	Leticia
Amazonas	El Encanto
Amazonas	La Chorrera
Amazonas	La Pedrera
Amazonas	La Victoria
Amazonas	Mirití-Paraná
Amazonas	Puerto Alegría
Amazonas	Puerto Arica
Amazonas	Puerto Nariño
Amazonas	Puerto Santander
Amazonas	Tarapacá
Caquetá	Florencia
Caquetá	Albania
Caquetá	Belén de Los Andaquíes
Caquetá	Cartagena del Chairá
Caquetá	Curillo
Caquetá	El Doncello
Caquetá	El Paujil
Caquetá	La Montañita
Caquetá	Milán
Caquetá	Morelia

State	Municipalities
Caquetá	Puerto Rico
Caquetá	San José del Fragua
Caquetá	San Vicente del Caguán
Caquetá	Solano
Caquetá	Solita
Caquetá	Valparaíso
Guainía	Inírida
Guainía	Barrancominas
Guainía	Mapiripana
Guainía	San Felipe
Guainía	Puerto Colombia
Guainía	La Guadalupe
Guainía	Cacahual
Guainía	Pana Pana
Guainía	Morichal
Guaviare	San José del Guaviare
Guaviare	Calamar
Guaviare	El Retorno
Guaviare	Miraflores
Putumayo	Mocoa
Putumayo	Colón

State	Municipalities
Putumayo	Orito
Putumayo	Puerto Asís
Putumayo	Puerto Caicedo
Putumayo	Puerto Guzmán
Putumayo	Puerto Leguizamo
Putumayo	Sibundoy
Putumayo	San Francisco
Putumayo	San Miguel
Putumayo	Santiago
Putumayo	Valle del Guamuez
Putumayo	Villagarzón
Vaupés	Mitú
Vaupés	Carurú
Vaupés	Pacoa

# IGARAPÉ INSTITUTE

a think and do tank

The Igarapé Institute is an independent think-and-do tank that conducts research, develops solutions, and establishes partnerships with the aim of influencing both public and corporate policies and practices in overcoming major global challenges. Our mission is to contribute to public, digital, and climate security in Brazil and worldwide. Igarapé is a non-profit and non-partisan institution, based in Rio de Janeiro, operating from the local to the global level.

Partner:

Rio de Janeiro - RJ - Brasil
